CHOBE NATIONAL PARK

Tucked up in Botswanas far northern border with Namibia is Chobe National park- one of the greatest wildlife destinations of Africa. This is the only park known for its large herd of elephants in Africa and estimated to be over 120000. Chobe National park is approximately 11700 square kilometers and it is made up of rich ecosystems and prestine landscape consisting of savanna plains, river, swamp and scrub. Winding through this beautiful ecosystem is the magnificent mighty chobe river. The Chobe River flows lazily through the Caprivi flood plains and provides a haven for huge herds of buffalo and elephant, zebra, wildebeest and impala which are followed closely by predators including lion, hyena, the elusive leopard and the odd pack of the now rare wild dog. The bird life in particular is exceptional.

SAVUTI

Savuti is a place of cheetah, wild dogs, lions and leopards and commonly known for leopards in hills and because of that a hill named leopard hill derives its name. Savute (or Savuti) is a remote corner of Chobe National Park renowned for its explosive big game viewing and notorious lion pride that would take down adult elephants. Savuti is a totally different area with mixed landscape of hill, savanna and mash that attracts cheetahs because of its wide view area.
